

Did you know?

Firefighters have a

 **9%**

higher risk of being diagnosed with cancer than the general U.S. population.*

Empowered By Early Detection

Hoag Offers Revolutionary Multi-Cancer Screening

Cancer screening is used to find cancer before a person has any symptoms. Through a new blood test available at Hoag, we can detect the presence of more than 50 types of cancers with 99.5% specificity, including:

✓ Testing with Ease

Completed with a simple blood draw

- Breast
- Colorectal
- Cervical
- Endometrial
- Esophageal
- Gallbladder
- Head and Neck
- Kidney (Renal)
- Liver/Bile Duct
- Lung
- Melanoma
- Ovarian
- Pancreatic
- Prostate

*Daniels RD, et al. Mortality and cancer incidence in a pooled cohort of US firefighters from San Francisco, Chicago and Philadelphia (1950-2009). *Occup Environ Med.* 2014;71(6):388-97. doi:10.1136/oemed-2013-101662 (<https://oem.bmj.com/content/71/6/388.short>)

A Breakthrough in Precision Medicine

This revolutionary technology for multi-cancer screening is proven effective at early and advanced stage cancer detection. It uses next-generation genetic patterns and machine learning to reveal significant DNA-level details. The precision of the screening provides highly accurate information at the moment of testing, such as identifying where the cancer originated in the body, to guide further diagnostic evaluation by Hoag physicians.

Patients will receive a comprehensive report and extended time with their physician to review screening results, and can utilize the insights from their screening to inform a personalized care plan.

Request a Screening Today

Adults with an elevated risk of cancer or individuals with a family history of cancer, should consult their physician about including this screening as part of their next physical exam or as a standalone lab appointment. Patients can call Hoag member services to review their insurance benefits and coverage for cancer screening.

Regular screening increases the chances of detecting certain cancers early, before cancer has a chance to spread. This new blood test offered by Hoag can complement other recommended screenings by the American Cancer Society.

With Hoag You Have Peace of Mind

As Orange County's top choice for cancer care, according to NRC data, the Hoag Family Cancer Institute and its facilities and treatment technologies set the stage for expanded cancer research and world-class clinical care.

The earlier that cancer can be found, the higher the chance of better outcomes.

*Modeled data extrapolated to 2020 US population ages 50 – 79. Screening includes methods with United States Preventive Services Task Force (USPSTF) A, B, or C rating (breast, colon, cervical, prostate, and lung). Data from Surveillance, Epidemiology, and End Results (SEER) 18 Regs Research Data, Nov 2017 Submission. Estimated deaths per year in 2020 from American Cancer Society Cancer Facts and Figures 2020.
